61 Forsyth Street, SW 11th Floor
Atlanta, GA 30303

**Subject: Final Phase I Environmental Site Assessment Report
Tennessee Wheel and Rubber TBA
Nashville, Davidson County, Tennessee
EPA Contract No. EP-W-05-054
Technical Direction Document No. TTEMI-05-003-0052**

Dear Mr. Norman:

The Tetra Tech EM Inc. Superfund Technical Assessment and Response Team (START) is submitting one copy of the Final Phase I Environmental Site Assessment for the Tennessee Wheel and Rubber TBA (Targeted Brownfields Assessment) site in Nashville, Davidson County, Tennessee.

If you have any questions or comments regarding this submittal, please contact me (John Galler) at (615) 252-4781 or Sandra Harrigan at (678) 775-3088.

Sincerely,

A handwritten signature in black ink that reads 'John F. Galler'.

John Galler, Ph.D., PG
START III Site Manager

A handwritten signature in black ink that reads 'Andrew F. Johnson'.

1.0 INTRODUCTION

The U.S. Environmental Protection Agency (EPA) directed the Tetra Tech EM Inc. (Tetra Tech) Superfund Technical Assessment and Response Team (START) to conduct a Phase I Environmental Site Assessment (ESA) at the Tennessee Wheel and Rubber (TNW&R) TBA (Targeted Brownfield Assessment) site (the property) located in Nashville, Davidson County, Tennessee. This work was assigned under Contract No. EP-W-05-054, Technical Direction Document (TDD) No. TTEMI-05-003-0052. The TNW&R property is located at 817 18th Avenue North in downtown Nashville. The property is located in a residential and light industrial area of Nashville. Specifically, the property is approximately 2 acres in size and bounded by 18th and 19th Streets to the east and west. The property is bounded to the south by TC Railroad, with an industrial facility beyond; and to the north by vacant and residential lots with Herman Street beyond (see Appendix A, Figure 1).

1.1 PURPOSE

The purpose of the Phase I ESA is to evaluate the potential environmental liability associated with the property. The environmental assessment serves to identify conditions or activities at the property and on nearby properties that present existing or potential environmental hazards. The information contained in this report is intended to assist interested parties in deciding whether additional investigation or remediation of the property is required. The contents of this report should not be construed as a recommendation by Tetra Tech for or against purchase, sale, financing, or redevelopment of the TNW&R property.

Information required to complete the Phase I ESA was obtained from interviews of people with knowledge of the property, a commercial database of federal and state records, and other resources, as follows:

- U.S. EPA Region 4, Atlanta, Georgia
- U.S. Geological Survey (USGS), Reston, Virginia, Nashville West, Tennessee Quadrangle 1997.
- Tennessee Department of Environment and Conservation (TDEC)
- Environmental Data Resources (EDR) Radius Map with GeoCheck. Database Search Results, 2008.
- Davidson County Tax Assessor's Office, Nashville, Tennessee
- Federal Emergency Management Agency (FEMA) National Flood Insurance Program, Flood Insurance Rate Map (FIRM) 2001.

The information is assumed to be complete and correct. Tetra Tech cannot be responsible for the quality or content of information from these sources.

1.2 SCOPE OF ASSESSMENT

The American Society for Testing Materials (ASTM) International Standard E 1527-05 (E1527-05) was used to set minimum criteria for data collected during the assessment. The assessment included a property reconnaissance for indications of hazardous materials, chemical and fuel storage, electrical transformers, distressed flora and fauna, ground surface staining, and suspicious odors. Tetra Tech conducted the reconnaissance at the TNW&R property on October 21, 2008. Observations were made with respect to potentially asbestos-containing materials (ACM), lead-based paint (LBP), and mold, but no samples were collected.

The Phase I ESA included research into current and historical land use at the property and surrounding area. The research included interviews with TDEC and EPA and examination of historical photographs and Sanborn fire insurance maps to identify past on-site activities that resulted in the presence or likely presence of hazardous substances or petroleum products on the property, known as recognized environmental conditions (REC). Available government database information prepared by EDR (2008) was reviewed to evaluate both the property and any listed sites within ASTM-recommended search distances that could affect the property (see Appendices B and C).

2.0 PROPERTY DESCRIPTION

This section describes the property and its location and discusses the environmental setting.

2.1 PROPERTY LOCATION AND DESCRIPTION

The TNW&R property is located at 817 18th Avenue North in Nashville, Davidson County, Tennessee in a residential and light industrial area within the city limits of Nashville (see Figure 1 in Appendix A). The property is an abandoned wheel and caster manufacturing facility that operated for an unknown amount of time. The property is bounded by 18th and 19th Streets to the east and west; to the south by TC Railroad, with an industrial facility beyond; and to the north by vacant and residential lots with Herman Street beyond (see Appendix A, Figure 1). The Nashville Metro on-line interactive property map states that the property is zoned industrial restrictive, is 1.97 acres in area with a frontage of 200 feet and sides

of 104 feet in length, is currently owned by Tennessee Wheel and Rubber Company, and was acquired on March 1, 1966 (see Appendix D). Sometime after acquiring the property, Tennessee Wheel and Rubber Company filed for bankruptcy. The property is currently improved with two buildings separated by a central flat, open, concrete area. The buildings both contain multiple rooms that were previously used for purposes such as manufacturing, product finishing, and offices. Currently, a substantial amount of debris is located in each of the buildings.

In 2006, EPA initiated an emergency removal action at the property due to observed releases of suspected potential hazardous substances and oil from drums stored at the property. Tetra Tech mobilized to the TNW&R property on May 22, 2006 to investigate the property, mitigate ongoing releases, and stabilize the property. However, analytical results provided to EPA indicated numerous hazardous substances and prompted additional activities following the initial response to stabilize the property. These activities included:

- Clearing and grubbing of the north sided of the property in order to extract 229 drums from the overgrown vegetation.
- Pumping of non-hazardous surface water and accumulated rain water from drums and containers to the Metro Water Services Publicly-Owned Treatment Works in Nashville via a nearby storm drain.
- Transportation and disposal of 96 containers of waste discovered at the property and crushing about 450 empty drums.
- Sampling, pumping, transportation, and recycling of 625 gallons of fuel oil identified in two USTs.

Solid samples collected from the property contained measurable concentrations of many metals, including arsenic and lead. Samples collected from drums contained 2-butanone (methyl ethyl ketone) at concentrations as high as 3.4 percent; tetrachloroethylene (PCE) at concentrations as high as 98.9 percent; toluene at concentrations as high as 90 percent; 2, 6-dinitrotoluene at concentrations as high as 2,050 milligrams per kilogram (mg/kg); and 4-nitrophenol at concentrations as high as 10,300 micrograms per liter ($\mu\text{g/L}$) (Tetra Tech, 2007).

2.2 ENVIRONMENTAL SETTING

The environmental setting includes information on the area topography, regional and local geology, regional hydrogeology, area flooding, and area wetlands.

2.2.1 Topography

The property is located in the Interior Plateau Physiographic Province in the Outer Nashville Basin region. The Outer Nashville Basin is characterized by rolling and hilly topography and slightly higher elevations than the surrounding areas. Streams in the area are of low to moderate gradient (EPA, 2008b). The land surface at the property is approximately 460 feet above sea level (see Appendix C).

2.2.2 Regional and Local Geology

The rocks forming the Outer Nashville Basin are capped by cherty-rich Mississippian-age formations and some Devonian-age Chattanooga shale. The region's limestone rocks and soils are high in phosphorous (EPA, 2008b).

2.2.3 Regional Hydrogeology

Ground water in the Nashville area occurs in the Ordovician Carbonate aquifer and consists primarily of limestone and dolomite, with small amounts of shale. Water in the carbonate aquifer occurs in solution-enlarged openings and is confined to partly confined near land surface. In many areas, the aquifer is connected to land surface by caves and sinkholes. The principal water bearing formations of the Ordovician carbonate aquifer are the Bigby, Carters, Ridley, and Murfreesboro Limestones (National Water Summary, 1984). The EDR report uses the AQUAFLOW Information System to provide data on the general direction of groundwater flow at specific points. The EDR report lists four wells; one, $\frac{1}{4}$ - $\frac{1}{2}$ miles southwest; two, $\frac{1}{2}$ - 1 mile east-northeast; and one, west-southwest of the property, with general direction of groundwater flow to the southeast and south-southeast. The use of the wells, depths, and the aquifer which the wells withdraw from are not included in the EDR report (see Appendix C). Municipal water in the Nashville area is provided by surface water obtained from the Cumberland River (EPA, 2008a; Nashville's Water Source, 2008).

2.2.4 Flooding

A review of the FEMA Flood Insurance Rate Map for the property indicated that the property is designated as Zone X, located outside the 500-year flood plain. This portion of Nashville is expected to be in an area of minimal flooding (see Attachment 1).

2.2.5 Wetlands

The property was inspected for the presence of sensitive ecological areas such as wetlands, vegetation, and floodplains on or immediately adjacent to the property. No wetlands were observed during the reconnaissance.

The USGS 7.5 minute series topographic map of Nashville, Tennessee (1997), which includes the property as well as adjacent properties, does not show any surface water bodies or delineated wetlands on the property or adjacent properties. The Cumberland River is located about 1.5 miles east, 2.5 miles north, and 1.9 miles west of the property (MapQuest, 2008) (see Appendix A, Figure 1 and Attachment 1).

3.0 HISTORICAL LAND USE

The 2005 ASTM guidelines require one historical source capable of documenting a property's land use history. For this assessment, three sources were used: (1) Sanborn fire insurance maps, (2) historical photographs obtained from the Nashville — Davidson County Bicentennial Library, and (3) TDEC records (see Appendices E and G).

3.1 OWNERSHIP HISTORY

Property ownership information was obtained from the Davidson County Property Appraiser website. This information indicates that the property is currently owned by Tennessee Wheel and Rubber Company, with an acquisition date of March 1, 1966. The property information is contained in Appendix D. Mr. Stephen Ramsey, owner of the property, was contacted and interviewed by Tetra Tech regarding the historical use of the property.

3.2 SANBORN FIRE INSURANCE MAPS

Sanborn fire insurance maps, published between 1885 through at least 1971 (in some areas), identify potential fire hazards and, therefore, potentially adverse land uses (see Appendix E). Following is a summary of Sanborn maps available for the property and surrounding properties.

- 1914: The property consists of multiple parcels. Thirteen residential structures are identified on the eastern and western portions of the property. Two stores are located on the western portion of the property.
- 1950: The property consists of six residences, a restaurant, and a machine shop. A storage area is indicated at the rear of the restaurant. The residences are located on the eastern and western portions of the property. The restaurant is located on the southwestern portion of the property, and the machine shop is located on the southeastern portion of the property.
- 1957: The property consists of two residences, two restaurants, two stores, and Southern Enameling Company. The residences, restaurants, and stores are located on the northwestern and southern portions of the property and the Southern Enameling Company is located on the southeastern portion of the property. The Southern Enameling Company has an enamel bake oven in a building with wood posts and a waste loader in the rear. The restaurant on the southwestern portion of the property has an area of fire ruins at the back of the building. The present-day northern building is described as “mounting of rubber tires on industrial wheels.”
- 1963: The property consists of one residence, two grocery stores, one vacant and dilapidated structure that was previously a store at the southwestern corner of the property, a machine shop, and the present-day northern building described as “mounting of rubber tires on industrial wheels.” The residence is located on the southern portion of the property, the grocery stores are located on the northwestern portion of the property, and the machine shop is located on the southeastern portion of the property. The present-day northern building is described as having concrete floors, plastered walls, and steel posts. An area south and southwest of the building is indicated to have concrete floors.

4.0 PROPERTY INSPECTION

On October 21, 2008, Tetra Tech conducted a reconnaissance or site walkover of the property.

Photographs were taken during the reconnaissance and are presented in Appendix F. A summary of observations made during the reconnaissance is provided in the sections below.

4.1 CURRENT USES AND CONDITIONS

The TNW&R property is located at 817 18th Avenue North in Nashville, Davidson County, Tennessee in a residential and light industrial area within the city limits of Nashville (see Figure 1 in Appendix A).

The property is an abandoned wheel and caster manufacturing facility that operated for an unknown amount of time. The property is bordered by commercial properties on the east and south, and residential properties to the north and west. The Nashville Metro on-line interactive property map states that the property is zoned industrial restrictive, is 1.97 acres with a frontage of 200 feet and sides of 104 feet in length, is currently owned by Tennessee Wheel and Rubber Company, and was acquired March 1, 1966 (see Appendix D). Sometime after acquiring the property, Tennessee Wheel and Rubber Company filed for bankruptcy. The property is currently improved with two buildings separated by a central flat, open,

concrete area. The buildings both contain multiple rooms that were previously used for purposes such as manufacturing, product finishing, and offices. Currently, a substantial amount of debris is located in each of the buildings.

During the reconnaissance of the property and surrounding area, Tetra Tech did not observe any stressed vegetation, wetlands, or ponded water. Tetra Tech observed fill pipes (suggesting the presence of underground storage tanks [UST]), aboveground storage tanks (AST), drums, solid waste, transformers, fluorescent light ballasts, oily water sumps, potential ACM, and potential LBP. A palletized container of yellow powder believed to be casting sand was observed in the south building.

4.2 ABOVEGROUND AND UNDERGROUND STORAGE TANKS

One AST was observed in the northeastern portion of the north building. The AST was labeled as containing waste oil. UST-related fill pipes were observed on the northern and southwestern areas of the property suggesting the presence of USTs. However, USTs were not discussed in the EDR report for the property. The presence of the AST and UST fill pipes is considered a REC to the property.

4.3 SOLID WASTE LOCATED ON THE PROPERTY

No refuse containers are located on the property. On the date of the reconnaissance, solid waste (trash and rubber cuttings from tires) was observed extensively distributed throughout both buildings and in the open areas of the property. The solid waste is not considered a REC to the property.

4.4 HAZARDOUS WASTE LOCATED ON THE PROPERTY

Historical information indicates that the property has been used as residences, an enameling company, restaurants, a machine shop, and most recently as a rubber wheel manufacturer and mounting company (see Appendix C). Additionally, drums and 5-gallon buckets were observed on the property and adjacent property to the west of the north building during the reconnaissance on October 21, 2008. Some of the 55-gallon drums observed were labeled as containing hydraulic fluid. The 55-gallon drum of PCE observed in the north building during the 2006 emergency removal activities was removed during the 2007 activities conducted at the property (Tetra Tech 2006; Tetra Tech 2007). A discolored area at the former location of the PCE drum was observed during the reconnaissance. Three kilns are located in the south building, the bricks from which are thought to contain naturally occurring radioactive material

(NORM). The presence of drums and the reported contents, as well as NORM is considered a non-ASTM REC to the property.

4.5 ELECTRICAL TRANSFORMERS

During the reconnaissance, the property was inspected for the presence of liquid-cooled electrical units (transformers and capacitors). These units are of possible concern because they may contain polychlorinated biphenyls (PCB). Three pole-mounted transformers were noted on the TNW&R property during the reconnaissance. The transformers appeared to have been damaged, with the wires possibly cut or disconnected. The transformers are thought to be owned by Nashville Electric Service (NES). The presence of the transformers is considered a REC to the property; however, any concerns with the transformers will be the responsibility of NES.

Several fluorescent light ballasts of indeterminable age were observed in the two buildings. The ballasts may contain PCBs and are considered a REC to the property.

4.6 ASBESTOS

A visual survey of ACM was conducted at the property. The following suspect ACM were observed: wall and ceiling insulation in the former furnace room in the south building, fireproof sheeting located in the north building, remaining 9-inch by 9-inch floor tile mastic on a concrete pad located west of the north building, and roofing materials of the north building. The suspected presence of ACM is considered a non-ASTM REC to the property.

4.7 LEAD-BASED PAINT

A visual survey of LBP was conducted at the property. Several areas of suspect LBP were observed associated with debris on the western side of the property. The suspected presence of LBP is considered a non-ASTM REC to the property.

4.8 DRAINS AND SUMPS

Storm drains are located near the western and eastern portions of the property. The property slopes east, toward 18th Street. Storm water runoff from the property would flow to these storm drains or into storm

drains located along 18th Street. A storm drain was observed near the southwestern corner of the north building.

Two sumps were observed in the east end of the north building. The sumps were partially filled with oily water. The sumps are considered a REC to the property.

4.9 STRESSED VEGETATION

Tetra Tech did not observe any area of stressed vegetation during the property reconnaissance.

5.0 RECORDS REVIEW

Available government database information prepared by EDR (2008) was reviewed to evaluate both the property and any listed sites within ASTM-recommended search distances that could affect the property. The federal and state databases reviewed are listed in Table 1 of Appendix B.

The property was identified in the Emergency Response Notification System (ERNS); Facility Index System/Facility Registry System (FINDS); State Spills (SPILLS); and Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) databases. The ERNS relates to the 2006 and 2007 emergency removal action conducted by Tetra Tech on behalf of EPA at the property. The FINDS database does not report any pertinent information regarding the property. The SPILLS database reports the property as “an abandoned industrial facility with many drums and seepage from site into city drains.” A date is not given for the SPILLS database report. The CERCLIS database reports removal action starting on May 22, 2006, with a status of “cleaned up” (see Appendix C).

A review of the Comprehensive Environmental Response, Compensation (CERC)-No Further Remedial Action Planned (NFRAP) database identified two facilities within about ¼ mile of the TNW&R property. These properties are listed in Table 2 of Appendix B.

A review of the Resource Conservation and Recovery Act (RCRA)-NonGen database revealed seven facilities located within ¼ mile of the TNW&R property. The facilities are listed in Table 3 of Appendix B.

A review of the TDEC Solid Waste Facilities/Landfills (SWF/LF) database identified one SWF/LF facility within about $\frac{1}{8}$ mile of the TNW&R property. The facility is listed in Table 4 of Appendix B.

A review of the Leaking Underground Storage Tank (LUST) database provided by EDR revealed seven LUST facilities within about $\frac{1}{2}$ mile of the TNW&R property, as presented in Table 5 of Appendix B.

A review of the LUST Tennessee Reimbursable USTs (TRUST) database provided by EDR revealed five facilities within about $\frac{1}{2}$ mile of the TNW&R property, as presented in Table 6 of Appendix B.

A review of the Historical LUST CO (HIST LUST CO) database provided by EDR revealed one facility within $\frac{1}{2}$ mile of the TNW&R property (see Table 7 of Appendix B). This facility was found in an older, no longer used LUST database maintained by TDEC. The database was last updated in 1994.

A review of the Historical UST (HIST UST) database provided by EDR revealed three facilities within $\frac{1}{4}$ mile of the TNW&R property, as presented in Table 8 of Appendix B. These facilities were found in a database no longer updated by TDEC. The database was last updated in 2005.

None of the facilities listed in the database search appears to present an environmental concern at this time based on tank removal and closure information, spill information, relative topographic location, and distance from the property.

6.0 ENVIRONMENTAL CONCERNS

Environmental concerns associated with the property were identified both on and off the property, as described below.

6.1 ON THE PROPERTY

Based on the October 21, 2008, reconnaissance and a review of the available historical and environmental records, the following RECs were identified as associated with the property:

- Previous uses of the property have included residences, commercial activities (such as restaurants and stores), and industrial uses (such as machine shop and recent use in wheel manufacturing).

PCE is known to have been used in prior operations. The historical use of the property is considered a REC to the property.

- Two UST fill pipes were observed during the reconnaissance. The USTs were thought to have contained fuel that was used in the furnaces; however, the USTs were not registered, so the contents, sizes, and age of the USTs are not known. Potential soil and groundwater contamination may exist on the property as a result of leakage from these tanks. The USTs are considered a REC to the property.
- Drums in various conditions were observed in several areas of the property. Several of the drums are labeled “hydraulic fluid,” while other drums are unlabeled and appeared to contain solid waste. The drums are considered a REC to the property.
- Large amounts of solid waste (trash and rubber tire cuttings) were observed throughout the north and south buildings. The composition and origin of the waste are not known. The waste is not considered a REC to the property.
- A palletized container of yellow powder believed to be casting sand was observed in the south building. The casting sand is not a REC to the Property.
- EPA initiated an emergency removal action at the property in 2006. During the activities, a drum of PCE was observed in the north building and the drum was removed during subsequent removal activities. An associated discolored area was observed in the vicinity of the drum. The presence of a discolored area in the vicinity of the former location of the PCE drum and historical use of PCE, as well as the potential spill of PCE, is considered a REC to the property.
- Two oily sumps are located in the northeastern portion of the north building. The historical use and contents of these sumps are unknown. They are considered RECs to the property.
- The following suspect ACM were observed: wall and ceiling insulation in the former furnace room in the south building, fireproof sheeting located in the north building, remaining 9-inch by 9-inch floor tile mastic on a concrete pad located west of the north building, and roofing materials of the north building. The suspected presence ACM is considered a non-ASTM REC to the property.
- Numerous old light ballasts, likely older than 1978, were observed that may contain PCBs. Additionally, three pole-mounted transformers were observed in the central courtyard and are possibly damaged. The transformers are thought to be owned by Nashville Electric Service (NES). The presence of the transformers is considered a REC to the property; however, any concerns with the transformers will be the responsibility of NES. The ballasts are considered a REC to the property.
- Given the age of the buildings, it is likely that LBP is present. Suspect LBP was observed on debris on the western side of the property, and is thought to be on the exterior and possibly the interior walls of the buildings. The suspect LBP is considered a non-ASTM REC to the property.
- The fire brick in the kiln in the south building is suspected to contain NORM. NORM is considered a non-ASTM REC to the property.

- An area of the courtyard adjacent to the north building appears to have sustained a fire. According to Mr. Ramsey, this is where the chemical storage shed was located. Chemicals were reported to have been in the shed when the fire occurred. The location of the burned shed is considered a REC to the Property.

6.2 OFF THE PROPERTY

A review of federal and state database information identified several facilities within the ASTM-recommended search distances from the property. None of the facilities listed in the database search appears to present an environmental concern at this time based on tank removal and closure information, spill information, relative topographic location, and distance from the property. Crushed drums were observed on the adjacent property in the courtyard located west of the north building.

6.3 DATA GAPS

Two data gaps were identified during the Phase I ESA. Tetra Tech was unable to reach the owners of adjacent properties to conduct interviews. Also, time gaps of more than 5 years were noted in available historical information and aerial photographs. Tetra Tech does not believe that these data gaps impact the ability to render an opinion regarding potential RECs or *de minimis* conditions for the property.

7.0 CONCLUSIONS AND RECOMMENDATIONS

Tetra Tech performed a Phase I ESA for the property, and the findings are provided in Sections 3.0 through 6.0 of this report. Based on the findings, several conclusions were developed, as described below.

Recognized Environmental Conditions

A recognized environmental condition is defined as “the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater or surface water of the property.” Recognized environmental conditions do not “include de minimis conditions that generally do not present a material risk of harm to public health or the environment, and that generally would not be the subject of an

enforcement action if brought to the attention of appropriate government agencies. Conditions determined to be de minimis are not recognized environmental conditions” (ASTM E 1527-05).

This Phase I ESA has revealed the following recognized environmental conditions in connection with the TNW&R property:

- Previous uses of the property have included residences, commercial activities (such as restaurants and stores), and industrial uses (such as machine shop and recent use in wheel manufacturing). PCE is known to have been used in prior operations. The historical use is considered a REC to the property.
- Two UST fill pipes were observed during the reconnaissance. The USTs were thought to have contained fuel oil that was used in the furnaces; however, the USTs were not registered, so the contents, sizes, and age of the USTs are not known. Potential soil and groundwater contamination may exist on the property as a result of leakage from these tanks. The USTs are considered a REC to the property.
- Drums in various conditions were observed in several areas of the property. Several of the drums are labeled “hydraulic fluid,” while other drums are unlabeled and appeared to contain solid waste. Crushed drums were observed on the adjacent property in the courtyard located west of the north building. The drums are considered a REC to the property.
- A palletized container of yellow powder believed to be casting sand was observed in the south building. The casting sand is not a REC to the Property.
- During previous ER activities on the property, a drum of PCE was observed in the north building. The drum is no longer present. An associated discolored area was observed in the area of the drum. The presence and historical use, along with the potential spill of PCE, are considered a REC to the property.
- Two oily sumps are located in the northeastern portion of the north building. The historical use and contents of these sumps is unknown. They are considered RECs to the property.
- Numerous old light ballasts, likely older than 1978, were observed that may contain PCBs. Additionally, three pole-mounted transformers were observed in the central courtyard and are possibly damaged. The transformers are thought to be owned by NES. The presence of the transformers is considered a REC to the property; however, any concerns with the transformers will be the responsibility of NES. The ballasts are considered a REC to the property.
- An area of the courtyard adjacent to the north building appears to have sustained a fire. According to Mr. Ramsey, this is where the chemical storage shed was located. Chemicals were reported to have been in the shed when the fire occurred. The location of the burned shed is considered a REC to the Property.

Additionally, the following non-ASTM RECs were observed for the property:

- The following suspect ACM were observed: wall and ceiling insulation in the former furnace room in the south building, fireproof sheeting located in the north building, remaining 9-inch by 9-inch floor tile mastic on a concrete pad located west of the north building, and roofing materials

of the north building. The suspected presence ACM is considered a non-ASTM REC to the property.

- Given the age of the buildings, it is likely that LBP is present. Suspect LBP was observed on debris on the west side of the property and is thought to be on the exterior and possibly the interior walls of the buildings. The suspect LBP is considered a non-ASTM REC to the property.
- The fire brick in the kiln in the south building are suspected to contain NORM. NORM is considered a non-ASTM REC to the property.

Based on the findings of the Phase I ESA, Tetra Tech recommends conducting a Phase II Limited Subsurface ESA to include an electromagnetic survey to identify potential USTs or other buried containers and the collection of subsurface soil and ground water samples to evaluate the presence of contamination at the property.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 12/03/2007 has revealed that there are 2 CERC-NFRAP sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 08/20/2008 has revealed that there are 7 RCRA-NonGen sites within approximately 0.25 miles of the target property.

STATE AND LOCAL RECORDS

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Department of Environment & Conservation's list: Sanitary, Industrial, Demolition, Solid Waste Processing Facilities and Closed Landfills.

A review of the SWF/LF list, as provided by EDR, and dated 07/24/2008 has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 08/13/2008	Source: EPA

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/30/2008	Source: EPA
Date Data Arrived at EDR: 05/06/2008	Telephone: N/A
Date Made Active in Reports: 06/09/2008	Last EDR Contact: 08/27/2008
Number of Days to Update: 34	Next Scheduled EDR Contact: 10/27/2008
	Data Release Frequency: Quarterly

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 08/14/2008	Source: EPA
Date Data Arrived at EDR: 08/27/2008	Telephone: N/A
Date Made Active in Reports: 09/23/2008	Last EDR Contact: 09/29/2008
Number of Days to Update: 27	Next Scheduled EDR Contact: 10/27/2008
	Data Release Frequency: Quarterly

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267
Date Made Active in Reports: 03/30/1994	Last EDR Contact: 08/18/2008
Number of Days to Update: 56	Next Scheduled EDR Contact: 11/17/2008
	Data Release Frequency: No Update Planned

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 07/09/2008	Source: EPA
Date Data Arrived at EDR: 07/22/2008	Telephone: 703-412-9810
Date Made Active in Reports: 08/25/2008	Last EDR Contact: 09/19/2008
Number of Days to Update: 34	Next Scheduled EDR Contact: 12/15/2008
	Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 12/03/2007	Source: EPA
Date Data Arrived at EDR: 12/06/2007	Telephone: 703-412-9810
Date Made Active in Reports: 02/20/2008	Last EDR Contact: 09/15/2008
Number of Days to Update: 76	Next Scheduled EDR Contact: 12/15/2008
	Data Release Frequency: Quarterly

LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

Date of Government Version: 08/19/2008	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/29/2008	Telephone: 202-564-6023

RCRA-TSDF: RCRA - Transporters, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 08/20/2008

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 08/20/2008
Date Data Arrived at EDR: 08/21/2008
Date Made Active in Reports: 09/09/2008

DOT OPS: Incident and Accident Data

Department of Transportation, Office of Pipeline Safety Incident and Accident data.

Date of Government Version: 05/14/2008	Source: Department of Transportation, Office of Pipeline Safety
Date Data Arrived at EDR: 05/28/2008	Telephone: 202-366-4595
Date Made Active in Reports: 08/08/2008	Last EDR Contact: 08/29/2008
Number of Days to Update: 72	Next Scheduled EDR Contact: 11/24/2008
	Data Release Frequency: Varies

CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Data Release Frequency: Quarterly

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

STATE AND LOCAL RECORDS

SHWS: Promulgated Sites

"Inactive hazardous substance sites that constitute an imminent, substantial danger" is an inactive hazardous substance site where there is a threat of danger to the public health, safety, or environment which is both real and presently existing. Such situations may include, but are not limited to one or more of the following: an immediate action is necessary to minimize an ongoing threat to the public health or pollution of the environment, an inactive hazardous substance site where there is an active release, where direct access to the hazardous substance is not controlled, or where incompatible hazardous substances are found in close proximity. Also known as Promulgated Sites List.

VCP: Voluntary Cleanup, Oversight and Assistance Program Sites

The Voluntary Cleanup Oversight and Assistance Program (VOAP) offers people the opportunity to work proactively with state government to address necessary cleanup of a property to return it to productive use. In return for their efforts, participants can receive a No Further Action letter and a release of liability for areas where investigation and cleanup is conducted. The program is open to everyone with an interest in addressing contamination at a site.

CDL: Registry of Contaminated Properties

Pursuant to TCA 68212509 the following properties have been quarantined because of methamphetamine production, but have not been cleaned and certified within the 60day time frame allotted by the statute. These properties are hereby registered by the Tennessee Department of Environment and Conservation as unremediated methamphetamine sites. This is not a comprehensive list of quarantined properties. These are properties that TDEC has been notified as being quarantined, but have not been cleaned within the 60 day grace period. Other properties where methamphetamine production residues are a concern may not have been quarantined, may not have been reported to TDEC, or may not have passed the 60day grace

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

817 18TH AVE N
NASHVILLE, TN 37203

TARGET PROPERTY COORDINATES

Latitude (North):	36.16307 - 36° 9' 47.1"
Longitude (West):	86.80388 - 86° 48' 14.0"
Universal Tranverse Mercator:	Zone 16
UTM X (Meters):	517639.8
UTM Y (Meters):	4001852.5
Elevation:	462 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	36086-B7 NASHVILLE WEST, TN
Most Recent Revision:	1997

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Target Property County</u> DAVIDSON, TN	FEMA Flood <u>Electronic Data</u> YES - refer to the Overview Map and Detail Map
Flood Plain Panel at Target Property:	4700400166B
Additional Panels in search area:	4700400162B 4700400168B 4700400164B

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u> NASHVILLE WEST	NWI Electronic <u>Data Coverage</u> Not Available
------------------------------------------------------	---------------------------------------------------------

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
1	1/4 - 1/2 Mile SSE	SE
10	1/2 - 1 Mile WNW	SSE

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Paleozoic
System: Ordovician
Series: Middle Ordovician (Mohawkian)
Code: O2 *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: MAURY

Soil Surface Texture: silt loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained. Soils have intermediate water holding capacity. Depth to water table is more than 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: MODERATE

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	16 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay. FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 6.00 Min: 2.00	Max: 7.30 Min: 5.10
2	16 inches	29 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 6.00 Min: 0.60	Max: 6.50 Min: 5.10
3	29 inches	42 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 6.00 Min: 0.60	Max: 6.50 Min: 5.10
4	42 inches	75 inches	silty clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Elastic silt.	Max: 2.00 Min: 0.60	Max: 6.00 Min: 4.50

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silty clay loam
unweathered bedrock

Surficial Soil Types: silty clay loam
unweathered bedrock

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: silty clay loam
stratified
clay
unweathered bedrock
silt loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory

Source: Tennessee Spatial Data Server

Telephone: 931-528-6481

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

www.edrnet.com

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDRs professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

The EDR-City Directory Abstract

EDR City Directory Abstract

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening report designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Thank you for your business.

Please contact EDR at 1-800-352-0050
with any questions or comments.

SUMMARY

- ***City Directories:***

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1908 through 2005. (These years are not necessarily inclusive.) A summary of the information obtained is provided in the text of this report.

This report compiles information by geocoding the subject properties (that is, plotting the latitude and longitude for such subject properties and obtaining data concerning properties within 1/8th of a mile of the subject properties). There is no warranty or guarantee that geocoding will report or list all properties within the specified radius of the subject properties and any such warranty or guarantee is expressly disclaimed. Accordingly, some properties within the aforementioned radius and the information concerning those properties may not be referenced in this report.

EDR Historical Topographic Map Report

Environmental Data Resources, Inc.'s (EDR) Historical Topographic Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topographic Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the early 1900s.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report AS IS. Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

APRIL 20, 2001**

Federal Emergency Management Agency

This is an official copy of a portion of the above referenced flood map. It was extracted using F-MIT On-Line. This map does not reflect changes or amendments which may have been made subsequent to the date on the title block. For the latest product information about National Flood Insurance Program flood maps check the FEMA Flood Map Store at www.msc.fema.gov

LEGEND

- SPECIAL FLOOD HAZARD AREAS INUNDATED BY 100-YEAR FLOOD
 - ZONE A** No base flood elevations determined.
 - ZONE AE** Base flood elevations determined.
 - ZONE AH** Flood depths of 1 to 3 feet (usually areas of ponding); base flood elevations determined.
 - ZONE AO** Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.
 - ZONE A99** To be protected from 100-year flood by Federal flood protection system under construction; no base flood elevations determined.
 - ZONE V** Coastal flood with velocity hazard (wave action); no base flood elevations determined.
 - ZONE VE** Coastal flood with velocity hazard (wave action); base flood elevations determined.
- FLOODWAY AREAS IN ZONE AE
- OTHER FLOOD AREAS
 - ZONE X** Areas of 500-year flood; areas of 100-year flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 100-year flood.
- OTHER AREAS
 - ZONE X** Areas determined to be outside 500-year floodplain.
 - ZONE D** Areas in which flood hazards are undetermined, but possible.
- UNDEVELOPED COASTAL BARRIERS*

Identified 1983	Identified 1990 or Later	Otherwise Protected Areas Identified 1991 or Later
- *Coastal barrier areas are normally located within or adjacent to Special Flood Hazard Areas.

	Floodplain Boundary
	Floodway Boundary
	Zone D Boundary
	Boundary Dividing Special Flood Hazard Zones, and Boundary Dividing Areas of Different Coastal Base Flood Elevations Within Special Flood Hazard Zones.
